**+1026%** 

The 87th China International Medical Equipment Fair (CMEF), organized by Reed Sinopharm Exhibitions, took place in Shanghai from May 14th to 17th. Various industry associations, societies, foundations, research institutions, and academic institutions supported the fair. With the theme "New Tech, Smart Future", this exhibition showcased the latest advancements in the medical equipment industry. There are variety of concurrent events, including the 34th International Component Manufacturing and Design Show (ICMD), International Rehabilitation and Personal Health Show (CRS), International Elderly Care and Nursing Show (CECN), Intelligent Health China (IHC), Emergency, Rescue & Safe China, International Life Care Products Exhibition (Life Care), and Animal Health China (AHC).

Employing the finest resources, this massive **320,000sqm** exhibition demonstrated both the resilience of a recovered economy and the strength of the thriving medical equipment sector. The 87th CMEF brought together state-of-the-art technologies and hosted insightful academic discussions. Nearly **5,000 local and international exhibitors** from across the industrial chain presented a selection the industry's most advanced products and introduced thousands of new innovations. More than **1,000 academic experts and opinion leaders** engaged in nearly **80 forums**, facilitating trend spotting and promoting idea exchange.

The 87th CMEF was a platform primed for new business opportunities and embracing globalization. The fair welcomed over **300,000 professional visitors** from various medical institutions and distributors. The attendance of international visitors hailing from **139 countries and regions** not only highlighted the fair's global appeal, but also cemented its role as a "gateway" for the global promotion of medical equipment.

## Visitor Profile

## Visitor and Exhibitor Feedback

### Exhibitor Satisfaction Rate

### Repeat Exhibitor Rate

### Visitor Satisfaction Rate

### Visitor Recommendation Rate

- 95% of exhibitors were satisfied with the overall performance of CMEF as it met their expectations in expanding their clientel, opening up new markets, promoting their brands, and obtaining key industry information.
- 97% of exhibitors said they were willing to attend the next exhibition based on the success of the 87th CMEF.
- Visitors expressed that CMEF provided a critical opportunity to obtain the most up to date medical device industry information, learn about newly developed products, and engage with qualified exhibitors.
- 94% of visitors said they would recommend CMEF, and 90% of visitors expressed interest in joining the next show.

1

## MEDICAL IMAGING

Medical imaging technology is continuously advancing, becoming smarter, faster, clearer, safer, and more precise. The 5G intelligent imaging era has sparked interest in new digital medical solutions, AI-assisted diagnosis and treatment, and precision medicine. The Medical Imaging area was dedicated to the latest trends in the industry, including radiology, ultrasound, nuclear medicine, molecular imaging, intervention, and AI. It showcased a wide range of intelligent imaging products tailored to grassroots medical needs, as well as advancements in technology including artificial intelligence, deep learning, big data, and the thorough integration of 5G Internet.

2

## IVD

The IVD zone highlighted the industry's rapid development, featuring leading technological products from the entire industry chain of biochemical immunology, molecular diagnostics, microbiology, hematology, and chemiluminescence. Moreover, it introduced state-of-the-art advancements in rapid testing homekits, early cancer screenings, fever clinic and laboratory solutions, biological sample storage and cold chain, wearable devices, pathological research, and POCT in the field of molecular diagnostics.

3

## MEDICAL OPTICS

This zone displayed innovative technological products in medical optics from various brands. It included an overall solution for surgical endoscopy based on 5G technology, a digestive endoscopy system for early cancer screening, capsule endoscopy, high-definition electronic endoscope systems, disposable endoscopes, and laser surgical treatment equipment. The zone exhibited a comprehensive display of the industry's development and provided a space for communication and collaboration among industry professionals.

4

## ELECTRONIC MEDICAL EQUIPMENT

This zone featured "smart" intensive care and life support monitoring devices, incorporating various intelligent, network-linked, and information-based technologies. Products displayed at the event included continuous mobile patient monitors, microwave ablation systems, minimally invasive treatments, low-temperature and otolaryngological plasma devices, hemodialysis equipment, and maternal health products, which included smart obstetrics and smart pediatric care.

5

## OPERATING ROOM

Exhibitors in this zone showcased new operating rooms with integrated technology. This included digitally enhanced operating rooms, remote operating rooms based on 5G technology, innovative ventilators, anesthesia machines, and integrated solutions for surgical/ICU equipment. Cutting-edge technological products such as the Internet of Things enabled surgical emergency equipment and emergency solutions were also on display.

6

## MEDICAL CONSUMABLES

In addition to traditional medical supplies, this zone promoted a variety of domestically produced products. These included pipeline flex embolization devices, stent retrievers for ischemic stroke, neurointerventional distal access catheters, occlusion balloon catheters, biopatches for cardiovascular surgery, microvascular, and more. Moreover, this zone unveiled new products including but not limited to the first domestically produced umbrella-shaped long-lasting retrievable inferior vena cava filters, single-use radiofrequency ablation catheters, stripping catheters for the great saphenous vein, peripheral dilation catheters, drug-coated balloon catheters, and fresenius polysulfone dialyzers/filters.

7

## ORTHOPEDICS

This area was dedicated to the orthopedic industry chain, showcasing an all-inclusive spectrum of the latest technological achievements in the orthopedic field. Specifically, it contained a series of orthopedic products, such as orthopedic medical robots and orthopedic repair materials for joint repair, spine repair, general, trauma, and sports medicine related treatments. This exhibition also attracted orthopedic clinical physicians, orthopedic instrument manufacturers/distributors/agents, as well as upstream equipment and service suppliers in the orthopedic industry, further promoting communications, exchange, and business opportunity.

8

## DISINFECTION AND INFECTION CONTROL

This area provided a platform for new technologies supporting the growing industry of hospital disinfection and infection control industry in the post-pandemic era. It showcased a comprehensive range of disinfection equipment and services applicable to various environments, from healthcare facilities to homes, schools, and offices.

9

## HOSPITAL CONSTRUCTION & LOGISTICS MANAGEMENT

This zone displayed innovative technological products from various brands. This included holistic solutions for surgical endoscopy based on 5G technology, a digestive endoscopy system for early cancer screening, capsule endoscopy, high-definition electronic endoscope systems, disposable endoscopes, and laser surgical treatment equipment. It was an extensive presentation of the industry's development and offered opportunities for communication and collaboration among industry professionals.

10

## MEDICAL SERVICES

Medical services are developing rapidly, particularly through broad implementation of 5G, new infrastructure, and artificial intelligence in the medical field. Thus, medical services have caught the attention of various industries. The exhibition space offered a gathering point for host of third-party medical service enterprises that provide medical company registration, certification, regulatory consulting, CRO, and CMO. Additionally, exhibitors from various service sectors related to hospital informationization, telehealth, hospital management, patient medical care, hospitalization services, and medical security debuted their new products.

11

## MEDICAL SIMULATION

Medical learning simulation is a growing trend in medical education and a key innovation. The Medical Simulation area was established to promote technology's application and deep integration in various industries, universities, and research projects. Products displayed in this area included training systems, physiologically-driven models, interactive computer training models, part task trainers (PTT), basic anatomy models, and so on.

12

## INTERNATIONAL ZONE

CMEF, as a leading global medical device exhibition platform, continuously contributes to the international development of the industry by promoting international exchange, cross-border trade, and multilateral cooperation across various fields. This exhibition attracted a multitude of internationally renowned brands to present their core products. Various events held in tangent with CMEF likewise highlighted advanced medical technology, products, and services of leading medical institutions and enterprises from around the world.

## Highlights

**13**

### IHC

Intelligent Health China focuses on intelligent technologies in the medical field. It aims to elevate the industry in the global technology value chain. This exhibition enticed renowned smart healthcare companies domestically and internationally, which presented various technological innovations. These included innovations in mobile and remote monitoring healthcare, telemedicine, artificial intelligence, health management, telehealth, big data and IoT, bioprinting, wearable devices, and digitized traditional Chinese medicine.

**14**

### MEDICAL ROBOTS

The Medical Robots zone showcased the first and only four-armed laparoscopic surgical robot developed by a Chinese company and approved for market. This breakthrough product covers a wide range of clinical applications including thoracic, abdominal, and pelvic surgeries, and is able to simultaneously perform both joint surgeries. Many other innovative medical robots were on display including the first domestically approved navigation+automatic execution orthopedic intelligent surgical system.

**15**

### CHINA INTERNATIONAL COMPONENT MANUFACTURING AND DESIGN SHOW

The China International Component Manufacturing & Design Show (ICMD) focused on the upstream manufacturing supply chain of medical devices. The space showcased intelligent technologies related to medical device manufacturing, such as smart manufacturing chips, industrial robots, UDI, collaborative robots, embedded chips, high-sensitivity pressure sensors, high-tech polymer medical adhesives, thin films and other new materials, servo motors, power solutions, automated assembly production lines for medical devices, high-speed packaging machines, and more. In addition, the show featured top products in the fields of new materials, design and development, packaging and printing, fluid control, pneumatic control, battery power supply, motors, transmission control, manufacturing equipment and OEM, optical components, and other subdivisions.

**16**

### CRS, CECN, and Life Care

The organizer, as a comprehensive service platform specializing in rehabilitation, elderly care, nursing, and personal health and lifestyle in the Asia-Pacific region, hosted a global showcase of the entire industry chain with new technologies, new products, and new applications. The included products related to intelligent rehabilitation and elderly care, assistive devices, smart aging, home medical care, nursing and healthcare, medical aesthetics, brain-computer interface, traditional Chinese medicine, nutrition and health, home-based care, aging-friendly transformation, sleep aids, and entertainment products for the elderly.

As a comprehensive service platform for the entire medical industry chain, CMEF capitalized on its platform by further innovating within its exhibition and conferences.

This exhibition consisted of nearly 80 conferences and forums covering a wide range of topics in the medical field, including medical imaging, in-vitro diagnostics, medical robotics, smart healthcare, rehabilitation and elderly care, emergency medicine, innovative materials, disinfection and infection control, pet health, medical services, private healthcare institutions, policy interpretation, procurement and matchmaking, and international cooperation. These forums addressed policy trends and industry hot topics in their respective areas. The events attracted thousands of domestic and international experts, opinion leaders, government officials, hospital administrators, department heads, and industry elites.

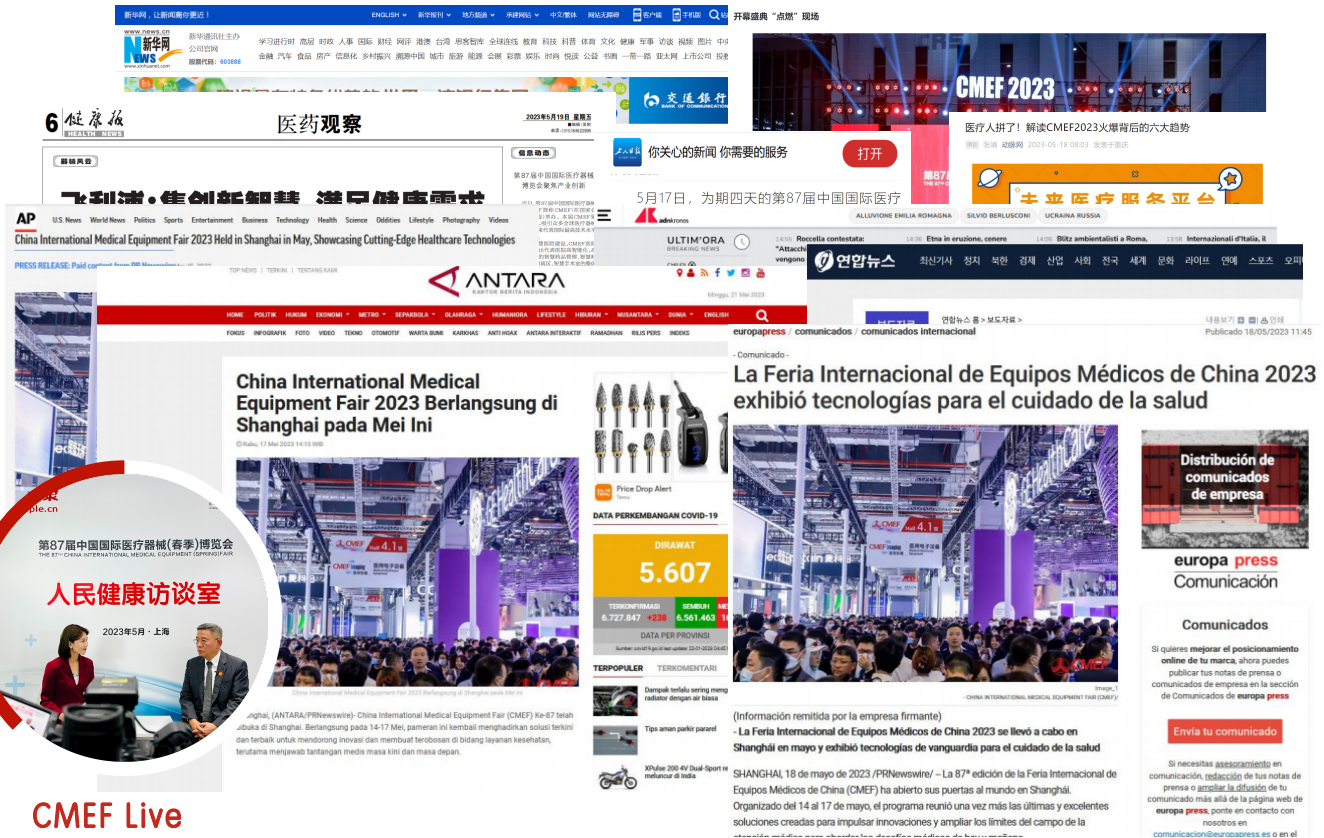

## Forums and Conferences List (Partial)

- Siyuan Medical Device Summit
- 2023 China Clinical Medical Imaging High-End Forum and "J10" Summit
- The 9th Non-Government Medical Service Development Innovation Forum
- The First Non-Government Medical Service High-Quality Development Forum;
- Workshop on Frontier in Biomedical Ultrasound (CUMB2023)
- National Emergency Medical Rescue Team & Digital Medical Equipment Development Seminar
- 2023 CMEF- Special Summit Forum on Orthopedic Surgery Robots
- The Second Forum on Biological Sample Storage and Transportation
- The Trend of Molecular Diagnosis in the Post COVID-19 Era
- The 11th Smart Healthcare Summit, the Bone/Cartilage Reconstruction and Nerve Regeneration Materials Forum
- The Development Forum for Doctor Groups in China's Non-government Medical Institutions
- China Non-Government Medical Institutions Procurement Matchmaking Meeting
- The First Digital Health International Exchange Summit and Digital Medical Product Go Global Forum
- Safety and Risk Evaluation of Implantable Devices in MRI Environment
- The First China's International Development Conference on Professional Talent on Pet
